

The Elsevier Foundation

Advancing sustainable development to create an inclusive science landscape

Unique contributions to sustainable development, in partnership with our research, health and tech communities

Creating an inclusive science landscape

Health & Innovation

Information technology can significantly advance the delivery of healthcare in developing countries. We directly support organizations working to improve health outcomes through the use of technology to disseminate health information.

Diversity in STM

The future of science requires a robust and diverse workforce drawn from all corners of society. We focus on advancing women in science and help under-served youth receive greater exposure to science and health education.

Research in Developing Countries

For many low-income countries, the scientific gap limits their involvement in vital research. We seek to redress the balance with partnerships designed to widen access to academic knowledge and deepen the involvement of scientists in SDGs-driven research.
