Building capacity and equity in research and  
health, for an inclusive and sustainable future

# The Elsevier Foundation Chemistry for Climate Action Challenge

Honoring innovative green and sustainable chemistry solutions that address the most pressing Global South challenges.

Climate change is the most important concern affecting the future of our planet. The need for innovative ideas to tackle global issues is more pressing than ever, and chemistry can play a key role in finding practical and sustainable solutions.

“What I cherish about chemistry is how it makes it easier to answer contemporary and future problems. As a researcher, I love to come up with alternative solutions for people and society.”
